

What makes Hypnos mattresses so beautiful ?

Hypnos double temper all of their springs.

This means that after the steel is turned, it is heat treated twice; this makes the springs stronger and longer lasting. Hypnos claim to be the only manufacturer to do this twice. This is what they call their reactive spring. Most pocket springs only have 4 or 5 turns in them.

HYPNOS
THE MOST COMFORTABLE BEDS IN THE WORLD

Hypnos don't try to baffle you with huge spring counts.

You can only get 2000 pockets on any one layer. If a mattress has more than 2000 pockets, then they are double layered, with springs half the size. Hypnos believe in only using one layer of *full length* springs, they simply put more turns into each one to make it more supportive.

Genuine Side Stitching.

A lot of manufacturers don't side stitch all of the way around. Many only stitch every second or third stitch. EVERY one is stitched on a Hypnos mattress. Each row takes one hour to complete.

Double Support Wires.

Most manufacturers use either a 6g rod edge or a flat wire (harder to feel) for the edge support. Hypnos use both. Why? Because you shouldn't sit on the edge of your bed! Hypnos know that everyone does, so this a counter measure to beef up the edges.

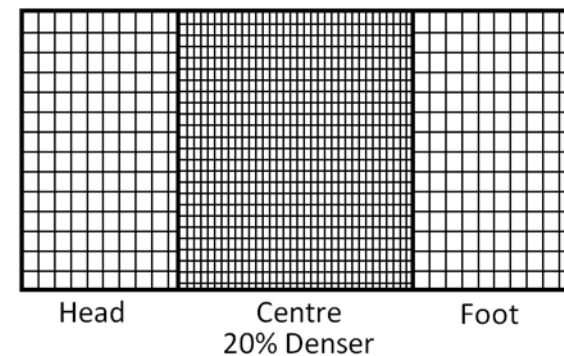

Lots of Air Vents and handles.

Hypnos use lots of vents on each mattress and they are ALL fully functioning, on many cheaper mattresses they don't actually vent and are only stitched in for

Luxury hotels.

Hypnos mattresses are considered a requirement for many hotels to get a 5 star rating. They are also in Malmaison, Radisson, Crown Plaza (Ask to see the huge list of hotels!) not to mention Lenny Henry's Premier Inn appearance.

Luxury Belgian Damask is used on all of their mattresses.

The Royal Warrant.

Many manufacturers have a Royal Warrant, Hypnos are one of the only ones currently active to the royal household. Wills and Kate bought a Hypnos mattress!

10 Year Guarantee. All mattresses come with a 5 year full guarantee, which extends to 10 years.

0% Carbon Footprint was awarded to Hypnos on their manufacturing process. ALL fillings are either recyclable or recycled. They use recycled denim cottons. They don't use memory foam because it doesn't degrade; instead they use **Eolis** which is made from recycled coke bottles.

British Wool Fillings. Hypnos pride themselves on using only the best fillings to build up the comfort layer of their mattresses .
